Research Interests

Robust and Trustworthy Deep Learning; Explainable AI; Generative Models; Computer Vision; Adversarial Machine Learning; Anomaly Detection; Medical Image Analysis.

Education

American International University–Bangladesh (AIUB), Dhaka, Bangladesh Feb 2022 – Apr 2026
Bachelor of Science in Computer Science & Engineering
CGPA: 3.98/4.00
Undergraduate Thesis: *Latent-Space Anomaly Detection via Explainable AI for Enhancing GAN Robustness*
Supervisor: Dr. Debajyoti Karmaker, Associate Professor, AIUB

Research Experience

[A Placeholder For Position] Aug 2026 – Present
ELITE Lab AI

- **Research Focus:** [Placeholder for core focus area]
- **Research Activities:** [Placeholder for methods and pipeline implementation]
- **Research Contribution:** [Placeholder for key technical innovation]
- **Research Outcomes:** [Placeholder for results and manuscripts]

Quality Assurance and R&D Engineer Intern June 2025 – October 2025
Deepchain Labs, Dhaka, Bangladesh

- Conducted research and development (R&D) to analyze product architectures, identify system bottlenecks, and enhance overall application usability and performance.
- Researched and authored optimized SEO frameworks and technical content strategies to improve overall platform visibility and user engagement.
- Designed and executed functional testing pipelines and usability studies to drive continuous product refinement.
- Formulated data-driven recommendations for features and workflows to optimize application quality and user experience.

Undergraduate Researcher Dec 2024 – April 2026
American International University–Bangladesh (AIUB), Dhaka, Bangladesh

Latent-Space Anomaly Detection via Explainable AI for Enhancing GAN Robustness

- Developed an explainable anomaly detection framework for identifying adversarial perturbations in GAN latent spaces.
- Proposed a dual-autoencoder approach combining a deterministic LatentExplainer and a variational LatentVAE to model deviations from the learned latent manifold.
- Investigated the proposed framework across WGAN-GP and StyleGAN2 architectures using MNIST, CIFAR-10, and CelebA datasets.
- Evaluated the framework under adversarial attacks including FGSM, PGD, and CW.
- Investigated latent-space representations and explainability as mechanisms for detecting adversarial perturbations in generative models.

Manuscripts in Preparation

- **Mahmud, R.,** Mahbuba, S., Alam, T., & Islam, M. B. *Monitoring Model Degradation Under Progressive Image Corruption: Early-Warning Behavioral Signals and Explanation Instability*. Conference manuscript in preparation.
- **Mahmud, R.,** Mahmud, A., Emona, I. B., & Shajid, M. S. A. *Latent-Space Anomaly Detection via Explainable AI for Enhancing GAN Robustness*. Manuscript in preparation.
- **Mahmud, R.,** & Mahmud, A. *Comparative Analysis of U-Net Variants for Brain Tumor Segmentation*. Manuscript in preparation.

Awards & Honors

Summa Cum Laude – Awarded for outstanding academic achievement under the honors program.	Dec 2026
Dean’s Honor Award – Recipient of six Dean’s Honor Awards for outstanding academic performance.	Dec 2022 – Apr 2026
Merit Scholarship – Awarded for consistent academic excellence during undergraduate studies.	Dec 2022 – Apr 2026
Talentpool Scholarship, JSC – Awarded for performance in Junior School Certificate examination.	Mar 2017

Research Projects

Monitoring Model Degradation Under Progressive Image Corruption PyTorch · CIFAR-10-C · Explainable AI · Grad-CAM	2026
- Evaluated an ImageNet-pretrained ResNet-50 on CIFAR-10-C across 15 corruption types and five severity levels to characterize model degradation under progressive image corruption. - Analyzed confidence change, Jensen–Shannon divergence, and prediction flip rate as behavioral signals for detecting emerging performance degradation. - Demonstrated that behavioral instability provided early warning for 9 of 15 corruption types, with a mean lead of 2 severity levels before accuracy fell below 80%.	
Comparative Analysis of U-Net Variants for Brain Tumor Segmentation TensorFlow · PyTorch · Medical Imaging · BraTS20	2025
- Conducted a comparative study of 3D U-Net, Residual 3D U-Net, and U-Net 3+ for brain MRI segmentation. - Evaluated model performance using Dice, Jaccard, and mIoU metrics. - Found U-Net 3+ to achieve the strongest segmentation performance among evaluated architectures.	
Real-Time Face Detection & Recognition with CNN Python · TensorFlow · OpenCV · Deep Learning	2025
- Developed and trained a custom convolutional neural network using 4,000+ facial images for real-time face recognition. - Implemented webcam-based inference using OpenCV and optimized frame processing for real-time operation.	

Technical Skills

Programming: Python, C++ , C, C#, Java, JavaScript, PHP
Machine Learning & AI: Deep Learning, Computer Vision, Generative Models, Explainable AI, Anomaly Detection, Image Segmentation, Object Detection, Federated Learning
Frameworks & Libraries: PyTorch, TensorFlow, OpenCV, YOLOv8, U-Net, U-Net 3+, Flower, .NET, ASP.NET
Research & Computing: Google Colab, Model Evaluation, Adversarial Machine Learning, Medical Image Analysis
Other Technologies: MySQL, SQL Server, Selenium, AJAX, jQuery

Professional Development

Software Testing & Quality Assurance	Nov 2024 – Jan 2025
Institute of Information Technology (IIT), Jahangirnagar University – Certified 80-hour program under EDGE Project	
IT Essentials: PC Hardware and Software	Dec 2023
American International University–Bangladesh (Cisco Networking Academy)	

Language Proficiency

IELTS Academic: Overall Band: [Score] (L: [X], R: [X], W: [X], S: [X])	Target: [Month Year]
